IDEMCORE NOTICE — THIRD-PARTY COMPONENTS AND UPSTREAM MODEL LICENCES

> Version 1.0 (2026-11-05). Referred to in MLA §2.16 and §8.4. Each delivery of Licensed Materials includes a `NOTICE` file for that exact release, with component versions and the full licence texts. This published copy lists the components used as of this version. Customer will not remove the `NOTICE` file.

Licensor: MATEIAM COMPANY LIMITED (CÔNG TY TNHH MATEIAM), trading as Idemcore. Contact: dev@idemcore.net.

1. Upstream open-weight models

The Licensed Models are derived from the open-weight releases below. Licensor has modified them (quantised and packaged for the Idemcore engine). The original licences and notices of each upstream release apply to that model, and any use restriction those licences require to be passed on applies to Customer's use of that model (MLA §8.4).

Licensed Model	Upstream release	Upstream licence	Modification
`idemcore-7b`	Qwen/Qwen2.5-7B-Instruct (Qwen team)	Apache License 2.0	quantised and packaged by Licensor
`idemcore-27b`	Qwen/Qwen3.8-27B (Qwen team)	Apache License 2.0, as stated in the upstream model card	quantised and packaged by Licensor
`idemcore-35b-moe`	Qwen/Qwen3.6-35B-A3B (Qwen team)	Apache License 2.0, as stated in the upstream model card	quantised and packaged by Licensor
Onboarded customer models	as listed in the Services Order Form	the licence of the customer's base model	as described in the Statement of Work

Models added later (for example gpt-oss, Apache License 2.0) are listed in the `NOTICE` file shipped with the release that adds them. Where an upstream licence differs from the table above, the upstream licence governs that model.

2. Open-source software in the Software and container images

Component	Licence
Linux base image and operating-system packages	the licence of each package (mainly GPL-2.0, LGPL-2.1, MIT, BSD), listed in the image's package database
Python runtime	Python Software Foundation License 2.0
GPU runtime libraries redistributed in the container image	the GPU vendor's redistribution licence for those libraries
curl, CA certificates	curl licence (MIT-style); MPL-2.0
`idemcore-verify` (receipt and log verifier, separately published)	Apache License 2.0

Source code for GPL or LGPL components in the container image is available from the upstream distribution or from Licensor on request at dev@idemcore.net for three years after delivery.

3. Apache License 2.0

A copy of the Apache License 2.0 is at https://www.apache.org/licenses/LICENSE-2.0 and is included in full in each delivered `NOTICE` file. The Idemcore engine itself is proprietary and is not licensed under any open-source licence.
